**DETAILED ACTION**

***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Specification***

2. The abstract of the disclosure is objected to because it is in claim format. Correction is required. See MPEP § 608.01(b).

***Drawings***

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "drive shaft" (claim 1) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement

Art Unit: 3724

Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1 and 9, the use of multiple transitional phrases on lines 1 and 16 is confusing, in that, it is not clear where the preamble of the claim ends and the body of the claim begins. Is applicant attempting to use a Jepson type claim?

In claim 1, there is no positive antecedent basis for "the casing".

In claim 7, it is not clear which "casing" is being referred to.

In claim 8, the use of the expression "in particular" is indefinite, in that, a broad range or limitation followed by linking terms (e.g., preferably, maybe, for instance, especially) and a narrow range or limitation within the broad range or limitation is considered indefinite since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired.

***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1, 3-7, and 9-10, are rejected under 35 U.S.C. 102(b) as being anticipated by Warashian et al., U.S. Patent Application Publication 2002/0116828.

Warashian et al. discloses the same invention as claimed including, for example, a motor (13); a tool head (62); a tubular arm (11) fitted at a first axial end (41) to the casing, and supporting the head at a second axial end (67); a propeller shaft (12) housed inside said arm and angularly integral with a drive shaft (34) of the motor; a bevel gear pair (64/63) housed inside said head and defined by a first hub (61) coaxial with the propeller shaft, and having a first bevel gear (63), and by a second hub (on the left in Figure 3) having a second bevel gear (64) meshing with the first bevel gear; a tool shaft (65) angularly integral with the second hub; a first adapter (26) for making said first hub and said propeller shaft angularly integral (see Figure 3).

As to claim 3, Warashian et al. disclose the use of second adapter (40) for attaching the first tubular portion to the second axial end of the tubular arm.

***Allowable Subject Matter***

8. Claims 2 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
